

FRUBO Product Description

Glossy Microporous GHW & GH 260g/m²

This premium photographic quality inkjet paper is the perfect medium for today's visual message. Designed for high end photo printing using both dye-based and pigment inks, this heavy-weight media offers a high performance and is optimized for high speed printing. Incorporating a microporous coating with a bright white base for vibrant colors, it is of excellent image quality for professional and demanding amateur photographers. Suitable for printing photographic images, exhibition prints and other graphics on many different printer types with rapid dry times, FRUBO's GLOSSY MICROPOROUS can save time and materials.

Best for

- Professional photographic images
- Commercial graphics
- High end commercial indoor posters
- Exhibition prints

The coating makes the difference...

FRUBO's GLOSSY MICROPOROUS uses photographic resin coated (RC) base paper to attain an outstanding glossy finish, and the microporous technology it employs means a dry touch straight from the printer and the reproduction of tones that are rich and consistent. This product provides better features such as a whiter and smoother glossy finish which cannot be obtained from other inkjet papers using an ordinary base. As a consequence, FRUBO presents:

- Heavy-weight media
- Stunning whiteness for high contrast
- Quick dry prints in real photo quality
- High water resistance
- Superb imaging performance
- Instantly usable prints
