

Instruction Manual

FRUBO

FRUBO Ink Jet Media are compatible with a wide range of colour and black-and-white inkjet printers. Because of variations among printers and ink manufacturers, some adjustments may be required to ensure the best results.

Product Handling

- Avoid touching the printable surface of the sheet. Hold it by its edges, and keep away from moisture and high humidity.
- Before stacking or storing your prints, allow sufficient time for the ink to dry thoroughly.
- Avoid storing your prints in places exposed to high temperatures, high humidity, or direct sunlight.

Media Loading

Consult your printer manual for the correct method, and make sure the printable side is oriented properly in the sheet feeder:

FRUBO Superior Photo Quality Glossy Paper

The printable side is glossier than the reverse side.

Printer Settings

Select media type and print mode settings using your installed printer software. Generally, the highest output resolution settings produce the best results. Some experimentation may be required. Single sheet feeding is recommended. Please refer to your printer manual or go to our Website (www.frubo.com) for specific recommendations.

Storage

Store unused sheets flat inside the package and in a cool, dry place.

Limitation of Liability

FRUBO products are intended for use with today's desktop inkjet printers. Products are guaranteed against manufacturing defects.
